

BRIGHTHUB

BrightHub Finance is a hybrid stablecoin infrastructure platform meticulously developed by the core team of Frax Finance, dedicated to redefining the decentralized finance (DeFi) ecosystem through innovative hybrid algorithmic stablecoin technology.

Registered in the United States and Singapore in 2025, BrightHub Finance is incubated by Huiwang Group, leveraging the XONE technology to establish a unique blockchain ecosystem. Built on the XONE public chain, the platform forms a stable, efficient, and sustainable financial ecosystem centered around USDH and XOC, further driving the synergy between USDB and BHC tokens.

Its pioneering 4-token mechanism and the world's first ISO (Initial Split Offering) fundraising model provide users with new decentralized financial investment opportunities, paving the way for a globally leading Web3 value reserve system.
