Initial Split Offering

- When BHC issuance reaches 0.11%, its price increases by \$0.01. For example, if the price starts at \$0.20 and increases to \$0.21, and when it reaches \$0.40, the issuance at 0.11% will increase to 0.22%.
- If \$500 is used to purchase BHC at \$0.21, then $500 / \$0.21 = 2380$ BHC.
